

Change MIP V5.4 to an earlier Version

PROBLEM DESCRIPTION

If a computer is used to work with more than one INCA version and its respective installed MIP (MATLAB Integration Package) Add-on, it is difficult to switch from the INCA V5.4 MIP to an earlier MIP-version.

CAUSE

The DLLs and M-files installed for the MIP INCA V5.4 differ fundamentally from those of earlier versions. For this reason, a control function has been installed that tests if a user is working with the correct INCA version.

```
MATLAB
File Edit Debug Desktop Window Help

To get started, select MATLAB Help or Demos from the Help menu.

??? >>> Inca <<<
Kann nicht mit INCA 5.3.0/11 ablaufen, V5.4 wird benötigt. Installieren Sie die erforderliche INCA-Version (erneut). (incaRci2.log)

Error in ==> StartResetStopReg at 1
IncaOpen;
```

SOLUTION

1. Delete all files whose names start with **INCA** from the directory
`<MATLAB>\toolbox\matlab\general;`
2. delete all files whose names start with **INCARCI2** from the directory
`<MATLAB>\bin\win32;`
3. install the appropriate MIP Add-On (e.g., for INCA V5.3) again.
In order to switch back to MIP version 5.4, only that add-on has to be installed again.
