## Press Release

### Expert Knowledge of Embedded Systems in High Demand

At ETAS, the new “Embedded Systems Consulting” division offers tool independent services in the area of embedded systems development.

For almost two decades, ETAS has applied its expert knowledge to the development of embedded software – be it as a vendor of software tools or as the developer of the well-known RTA operating systems, which are proving themselves in millions of series production installations. The high quality standard of ETAS products deployed around the globe is backed by intensive research and development efforts, close cooperation with research and industry, as well as participation in major standardization committees.

Established in January 2012, the new “ETAS Embedded Systems Consulting” division now offers – independently of the classic ETAS product business – this well-founded state-of-the-art knowledge also as a service. A team of seasoned experts provides customer-specific training classes, operative project support, e.g., with prototype creation, as well as coaching and consulting in the following fields of expertise: embedded software development, software architecture optimization, AUTOSAR compliance, testing, systems engineering, functional safety (ISO 26262, IEC 61508, etc.), and process improvement (e.g., to CMMI or SPICE).

The new “ETAS Embedded Systems Consulting” division is now making the accumulated embedded software expertise of many hundreds of man-years available at all major automobile manufacturing locations worldwide.

### **ETAS GmbH**

ETAS GmbH was founded in 1994 as a subsidiary of Robert Bosch GmbH. We today employ around 650 personnel and are represented in Germany, United States, Japan, Korea, P.R. China, India, France, UK, Sweden, Italy, Brazil, and the Russian Federation.

As a dependable and responsible partner, we offer a comprehensive product portfolio of integrated tools and tool solutions designed to increase quality and efficiency in the development and maintenance of embedded systems. Our tools are widely deployed in automotive and adjacent segments of the embedded industry.

The product portfolio is complemented by engineering services, consulting, training, and first-class customer service. We are an active contributor to standardization committees such as ASAM, OSEK, Nexus, AUTOSAR, AESAS, FlexRay, LIN, and JasPar.
