

Press Release

XCP-IP – XCP Integration Package

With the use of the XCP-IP software packet from ETAS, the integration of XCP drivers in ECUs is quick and easy. The current version supports measurement data acquisition, calibration, and the bypassing of ECU functions via CAN or Ethernet. The XCP driver conserves ECU resources and can be adapted by means of the included configuration tool. The comprehensive documentation includes a step-by-step description of how to integrate the driver software in the ECU. The XCP-IP Integration Package is specifically designed for deployment in conjunction with the ETAS development and calibration tools INCA, INTECRIO, and ASCET-RP. ETAS provides the XCP-IP Integration Package free of charge.
