

# INCA-RDE V1.9 - What's new?

## Online RDE Evaluation

# INCA-RDE V1.9 New Features

## New Features

- |   |  |
|---|--|
| 1 | Support von INCA V7.4  |
| 2 | Support of Windows 11  |
| 3 | Enhancement for RDE configurator with respect to the GUI             |
| 4 | Enhancement for RDE configurator with respect to configuration files |
| 5 | Enhancement for RDE report generation                                |

# 1. Support of INCA V7.4

## Motivation

- Securing full integration of INCA-RDE in INCA 7.4.x

## Solution

- Full integration in INCA 7.4.x
- Only INCA 7.4.x is supported by INCA-RDE V1.9

## 2. Support of Windows 11

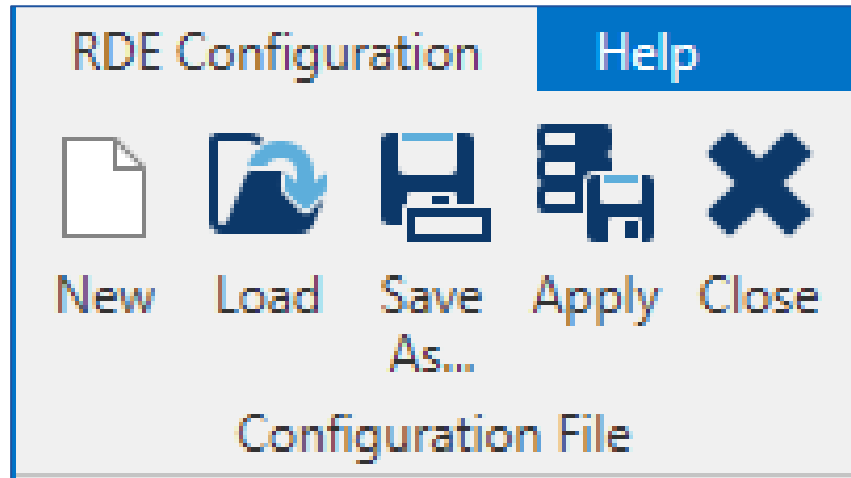

### **Motivation**

- Securing full compatibility of INCA-RDE V1.9 under a Windows 11 operation system

### **Solution**

- Defined tests of INCA V7.4 and INCA RDE V1.9 under a Windows 11 operation system

### 3. Enhancement for RDE configurator with respect to the GUI

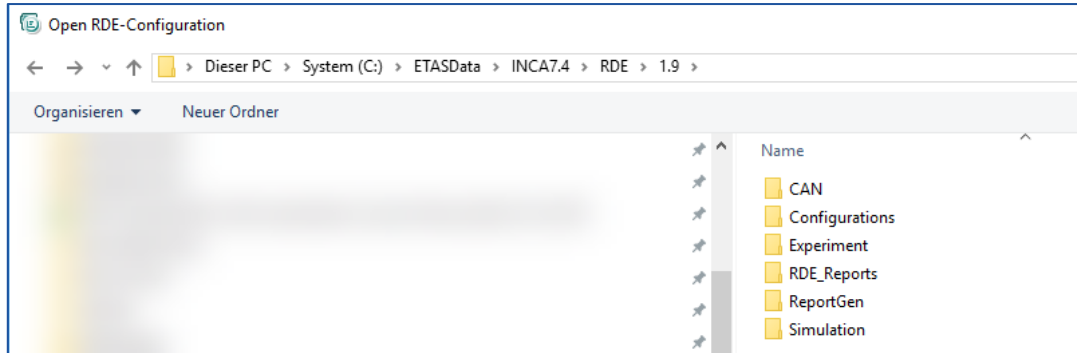

#### **Motivation**

- Customer request, who does "save as" to the configuration, without applying it, then generating an error at runtime

#### **Solution**

- Implementation of new naming and icons for the "Open", "Save as" and "Apply" use cases within the configurator

# 4. Enhancement for RDE configurator with respect to configuration files

## Motivation

- The configurations saved by customer have no defined place. Moreover, the `rde_configuration.json` file, seems equal to all other and it is located in the main directory, without protection from deletion or modification

## Solution

- Definition of one dedicated configuration folder "Configurations" during installation
- Per default configuration files will be saved in the "Configurations" folder
- Implementation of persistency for folder choice
- The `rde_configuration.json` will be "invisible" temporary stored in a INCA temp folder

# 5. Enhancement for RDE report generation

Report 2022-05-02 08\_14\_22

INCA-RDE V1.9.0 Build 6 - BETA, INCA V7.4.0 Build 154

Project: Test Project

User: XXXXXXXXXX

Dataset: 2345\_KY\_0987\_01

## Motivation

- General improvement of the RDE template with additional metadata
- The VIN (typically formed by 17 alphanumerical symbols) is not fitting well the template, both in the blue line top-left of every slide and in the dedicated place in the overview. The format should fit (either the font size is reduced, or the container is enlarged)
- Improvement of the selection of an RDE report template based on the regulation standard

## Solution

- Improvement of the RDE report template and the export of the RDE configuration data to the report template
- Assignment and validation of the RDE legislation with the corresponding RDE template via specific report ID
